Scaled dimensions are measured to the exterior boundaries of the exterior walls and the carpentry of interior demising walls and in fact vary from the dimensions that would be determined by using the description and definition of the "Unit" set forth in the Declaration (which generally states that the dimensions of the units shall be determined by the area of the units as shown on the floor plans and shall be subject to change without notice). The dimensions shown on the floor plans are generally taken at the greatest points of each given room (as if the room were a perfect rectangle), without regard for any closets. Accordingly, the area of the actual room will typically be smaller than the product obtained by multiplying the stated length times width. All dimensions are approximate and all floor plans and development plans are subject to change.
